

Preservation and Place: The Cultural Landscape of Providence

November 1-3

Photo Credit: Doc Searls

Humans have long altered the earth and left marks of habitation, and we continue to do so today. Each use shapes our city's landscape in tangible and intangible ways, from buildings and rivers to names and memories. This fall, the Providence Symposium will explore the many landscapes of our city—sacred, industrial, formal, threatened, vanished—and contemplate the ways we can recall and protect them or their memory for those who follow us.

Join PPS for this important multi-day Symposium that will seek to define and discuss a variety of cultural landscapes and inform the way we view and consider our city.
